Subject: AI workflow for IIR worksheet analysis

Good afternoon, team,

Over the last few days, I've spoken with many of you—either collectively or individually—about our efforts to use AI to evaluate, consolidate, and present credible data to leadership regarding IIR2+.

I'm confident that within this group we have the right skill sets, experience, and vision to accomplish this effort successfully.

I've shown some of you the Envision tool and briefly discussed its capabilities and limitations. Even with those limitations, I believe it remains the best option for large-scale data ingestion and evaluation.

I'm happy to set up a Teams meeting or meet in person to walk through it again and determine where and how it may fit into this initial effort.

Here is the link to Envision (must be accessed through a NIPR environment; ISC personnel can use the Windows App):

<https://envision.af.mil/>

I look forward to accomplishing great things with this team.
