Kaeden,

Our first port of call will actually be to evaluate our IIR worksheets. I'll send you the template and an example. This one is more time pressing, but once we figure out the right process we should be able to work through some of the details for the BoEs a bit easier.

At the very least if we can extract the data from the worksheets (maybe Python?) and ingest it into envision that would be a great start for mapping everything out.

We'll talk about it tomorrow when I stop by.

Subject: Example BOE's and Evaluation Criteria

Hi Wayne,

Dan and I just discussed initial plans to get started on the automated BOE evaluation tool. A couple questions:

1. Would you be able to send us some actual BOE's so we can get a feel for the data format?
2. Does a list of evaluation criteria already exist (in other words, a ruleset for what should be flagged)?

Those will give us a better idea of how to move forward.

Thanks,

Kaeden Teague
